STRUCTURAL BOLTED RACKING

SK ADVANTX

Structural Bolted Racking

Steel King's SK ADVANTX bolt together structural steel racking is a patent-pending product that uses upright components (posts, horizontal braces, diagonal braces) bolted together on-site to create a flexible, expandable racking solution uniquely designed for larger format automated solutions.

- > Bolt-together upright design allows for easy customization and in-field adjustability
- > Replacement of damaged components (for example brace damage due to forklift impact on aisle posts) can be easily replaced without any welding work
- > Shipping individual components allows dense packaging, reducing number of trucks compared to welded uprights - lowering shipping costs

SK ADVANTX and STEEL KING

Structural Bolted Racking

- > Steel King is the only North American company making structural, modular, bolted racking
- > First bolt together structural system which allows beams and bracing to be located at the same elevations
- > Made in the USA

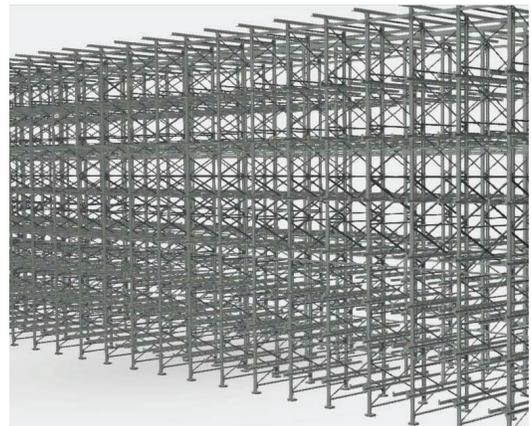

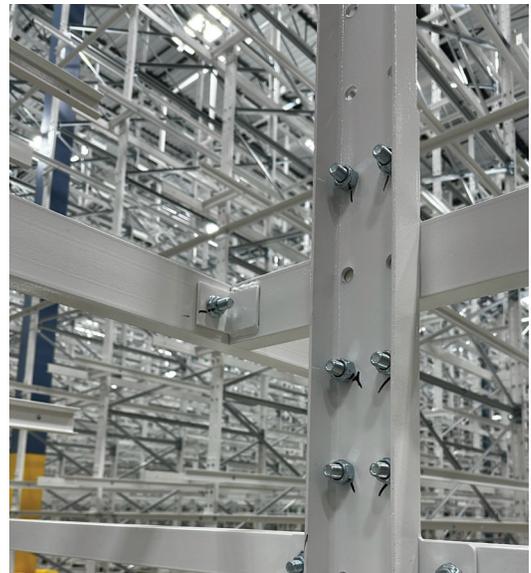

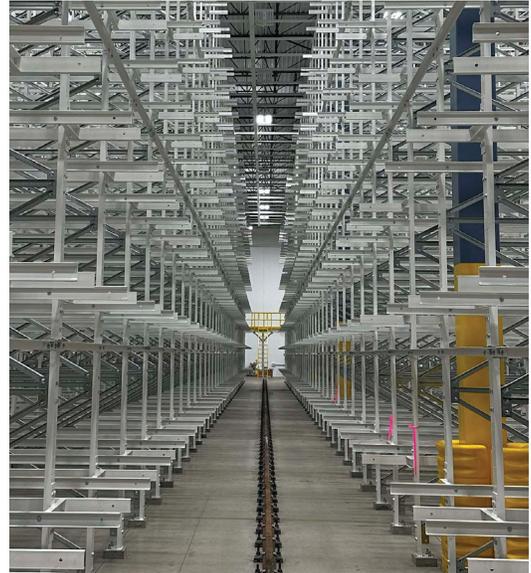

SK ADVANTX Markets

Structural Bolted Racking

- > Larger format automation (ASRS) and cold storage systems
 - Automation - Flexible solution with non-standard designs more adaptable to automation
 - Cold storage - Easier replacement of damaged rack portions common in cold storage environment
